

# Free Webinar: Lasting IoT Solutions

Breaking down IoT Use Cases into the core architecture elements to ensure a viable, feasible and scalable system

## Internet of Things as Enabler

The Internet of Things (IoT) serves as driver for building cyber-physical systems to enable data-driven processes as well as smart products and services. The key challenge is to build a lasting IoT Solution that is both scalable and resilient. To learn more about the key factors to success- fully deploy lasting IoT Use Cases, it is essential to understand how IoT works and what underlying core architecture elements must be set in place.

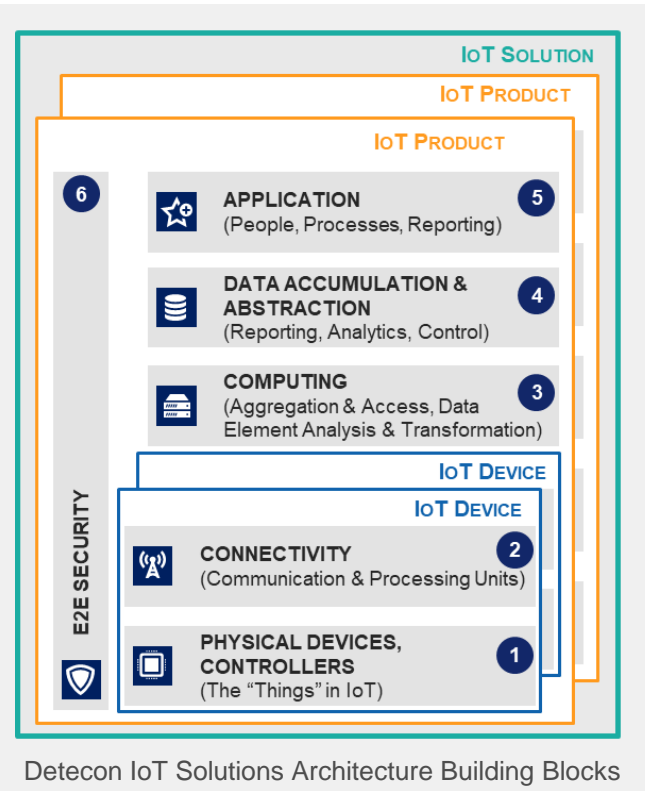

## Who are we?

Detecon is an international consulting company part of the Telekom Group, which focuses on the development and implementation of digital strategies with core competencies in innovation and technology advisory, management consulting, and the empowerment of the digital transformation.

**Feel free to reach out!**  
**The webinar will be held in EN**

## Learning about the IoT Solutions Architecture

As an experienced digitalization consultancy, we offer a free 90-minutes webinar to give participants an overview of the key topics, concepts and underlying core architecture elements of the Internet of Things. In doing so, we use examples from the manufacturing and logistics industries to provide a practical view on the topic.

Detecon IoT Solutions Architecture Building Blocks
